

Microsoft Purview

Microsoft Purview

- ✓ Data governance solution offered by Microsoft as part of its Azure cloud platform
- ✓ Help organizations discover, understand, protect, and manage their data
- ✓ Provide insights into data assets, ensure data compliance, and maximize the value of their data

Microsoft Purview

Key Features & Functionalities Of Microsoft Purview

Data Discovery & Catalogue

Provides data discovery capabilities to locate and catalog data sources

Data Classification

Supports data classification by automatically identifying sensitive and personally identifiable information (PII) data

Data Lineage

Allows users to visualize the flow of data from source to destination and understand data transformations

Data Insights

Includes analytics and reporting capabilities to gain insights into data usage, access patterns, and data quality

Data Security

Robust data security features, like encryption, access controls, and auditing

Compliance

Help meet compliance requirements like GDPR, HIPAA, & CCPA

Hybrid and Multi-Cloud

Designed to work in hybrid and multi-cloud environments

Integration with Azure Services

Integrates with other Azure services, Azure Data Factory, Azure Databricks
