Key Points About Azure Queue

- ✓ **Messages:** Instead of waiting for an immediate response, they can leave messages for each other in the queue
- ✓ **Asynchronous Communication:** Azure Queues enable asynchronous communication
- ✓ **Decoupling:** By using queues, your application components become more decoupled
- ✓ **Scalability:** Azure Queues can handle a large number of messages
- ✓ **Fault Tolerance:** Messages in the queue are stored redundantly
- ✓ **Processing:** Components can retrieve messages from the queue, process them, and remove them from the queue when done.
- ✓ **Integration:** Azure Queues integrate seamlessly with other Azure services and can be used in various application scenarios. ✓
