# Azure Service Health

- ✓ Microsoft Azure Service that offers real-time and historical information about the status of Azure services and regions

- ✓ Helps Azure customers stay informed about the health of Azure by providing details that might affect their workloads.

Azure Service Health

Key Features & Functionalities Of Azure Service Health

Status Dashboard	Provides a comprehensive & customizable status dashboard
Incident Notifications	Delivers real-time incident notifications when Azure services are experiencing issues or outages that impact customers
Planned Maintenance Alerts	Customers receive advance notice of planned maintenance
Historical Data	Maintains historical data about past incidents, allowing customers to review past issues and their resolutions.
Resource Impact Analysis	Customers can assess the potential impact of incidents by using the "Resource Impact Analysis" feature.
Customized Notifications	Allows customers to set up customized notifications and alerts based on their preferences
Integration with Azure Monitor	Service Health incidents can be integrated with Azure Monitor to trigger automated responses
